BUSINESS LOCALS.
The Clarendon Roller Flour Mills have installed an Up-to-date Feed Grinder for grinding all kinds of grain for stock feed. We grind corn, cob and shuck for horses, mules and cattle feed. Corn on the cob for hog feed. We crack corn for chicken feed. We not only make better feed from corn, but give back to you after paying toll, more pounds of available feed than you bring. Let us show you how it is done. Read what the U. S. Agricultural Chemist at Washington, D. C., says about the value of corn cobs as feed when ground and you will be surprised at what you are wasting. By grinding feed you not only effect a great saving in feeding costs, but experiments have proven that cows will give more milk and work animals will do more work when their feed is ground. Feeding whole grain has proven very expensive and wasteful. Can you afford it?

The axis, or cheater deer of the Indian jungle can claim to be the most ornamental of all the 35 races of deer to be seen gathered together at Weburn, England. In the early summer, when all the other deer except the wapiti are either shedding their horns or "in the velvet," the axis are in perfection, both of color and antlers. The large herd of this species looks as if carved out of ivory and red gold in the sunshine and verdure of English scenery. Their horns are almost white, their eyes and muzzles of jet black, their throats white and their sides and backs a brilliant golden tan, spotted with round dots of purest white.
